

SIMATS ENGINEERING

MCQ TEST

COURSE NAME: Software Testing

COURSE CODE: CSA3712

COURSE OUTCOME COVERED

CO1: *Apply software testing principles to enhance the effectiveness of software quality assurance and improve defect detection strategies.*

Assessment Tool Weightage: 50%

Code of Conduct:

I THULASI KRISHNA K (192421097) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.

I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student:

Answers:

1. A team applies systematic test design techniques during development. This reflects:
b) Testing as an engineering activity
2. If a project skips defined testing processes, what is the likely outcome?
b) Increased defects in production
3. Selecting test cases based on requirements demonstrates:
b) Process-driven testing
4. Applying equivalence partitioning is an example of:
b) Test design technique
5. A tester identifies missing requirements during testing. This shows:
b) Process gap
6. Following a structured testing lifecycle ensures:
b) Improved software quality
7. Which activity best represents testing as a process?
b) Executing test cases systematically
8. A tester reuses test cases from a repository. This supports:
a) Efficiency in testing
9. If defects are tracked and analyzed, it improves:
b) Software quality process
10. Applying boundary value analysis helps to:
b) Detect edge-case defects
11. A tester validates system behavior against requirements. This is:
b) Validation
12. Detecting defects before release reduces:
b) Maintenance cost
13. Applying testing principles ensures:
b) Early defect detection
14. Which principle suggests testing all inputs is impossible?
b) Exhaustive testing is impossible
15. A tester focuses on frequently failing modules. This uses:
b) Defect clustering principle

16. If testing starts early in SDLC, it helps:
 - a) Reduce defects cost
17. A tester designs test cases independently from developers. This ensures:
 - b) Objectivity
18. A tester reviews requirements for errors. Role performed is:
 - b) Tester
19. Reporting defects clearly is part of:
 - b) Tester's responsibility
20. A tester collaborates with developers to fix bugs. This shows:
 - b) Teamwork
21. A requirement ambiguity causes defects. Origin is:
 - b) Requirements phase
22. Incorrect algorithm implementation leads to:
 - c) Coding defect
23. Missing validation checks are example of:
 - c) Requirement defects
24. Poor UI design causing confusion is:
 - b) Design defect
25. A system crash due to memory leak is:
 - b) Coding defect
26. Classifying defects based on severity helps:
 - b) Prioritize fixing
27. A critical defect impacts:
 - b) Core functionality
28. A minor defect example is:
 - c) Typo error
29. Defect classification helps testers to:
 - b) Organize defects
30. A defect repository is used to:
 - c) Store defect details
31. Reusing defect data helps in:
 - a) Predicting issues

32. A defect repository improves:
 - b) Testing efficiency
33. Logging defects with details ensures:
 - b) Traceability
34. A tester uses past defect data to design tests. This is:
 - b) Experience-based testing
35. Incorrect login validation is an example of:
 - a) Functional defect
36. Slow response time is a:
 - b) Performance defect
37. Unauthorized data access indicates:
 - b) Security defect
38. Missing button functionality is:
 - a) Functional defect
39. Poor alignment in UI is:
 - b) UI defect
40. Applying testing principles avoids:
 - b) Redundant tests
41. A tester validates outputs using expected results. This is:
 - b) Test execution
42. If defects are not tracked, it leads to:
 - b) Poor traceability
43. Applying test process ensures:
 - b) Structured testing
44. Test case design based on requirements ensures:
 - b) High coverage
45. Early testing reduces:
 - a) Defect cost
46. A tester identifies repeated defects. This indicates:
 - b) Poor process
47. Reviewing test results helps:
 - b) Improve quality

48. A tester applies regression testing to:
b) Ensure fixes work
49. Identifying root cause of defects helps:
b) Prevent recurrence
50. A test plan ensures:
b) Organized testing
51. Applying defect classification improves:
b) Fix prioritization
52. A tester uses historical defect trends. This helps in:
b) Risk-based testing
53. Testing ensures product meets:
b) User requirements
54. A defect due to wrong requirement interpretation is:
b) Requirement defect
55. Applying process standards ensures:
b) Consistent quality
56. A tester documents defects clearly. This helps:
a) Developers fix quickly
57. A defect repository is analyzed to:
b) Improve testing strategy
58. A tester applies black-box testing. This focuses on:
b) External behavior
59. Defects found in testing phase indicate:
b) Earlier phase issues
60. Applying structured testing improves:
b) Product
